

Amendments to the Specification:

Please amend the specification as follows:

Page 4, paragraph beginning at line 6

Specifically, a first aspect of the present invention is a liquid-crystal display panel wherein the liquid-crystal display panel comprising a plurality of pixels; and a columnar spacer formed and disposed on a portion of a surface of a multi-layered films formed on a surface of a substrate facing to a transparent electrode provided in at ~~least~~ least a part of pixels among a plurality of pixel portions forming a liquid-crystal display panel and said portion of said multi-layered film having little variation in thickness.

Page 9, paragraph beginning at line 2

In the above-described configuration, the height of the ~~spacers-space~~ space is the total of the TFT-side transparent pixel electrode 205, the insulation film 209, the signal electrode 214 and the columnar spacer 203.

Page 11, paragraph beginning at line 9

In a liquid-crystal display panel 100 configured as described above, the height of the ~~columnar spacers-503~~ space is the total of the TFT-side transparent electrode 505, the insulation film 509, the signal electrode 514, and the columnar spacer 503.
